

[Карбонизирано дърво от пауловния](#) е вид дървесина, която се подлага на високотемпературна топлинна обработка, което повишава издръжливостта и устойчивостта на корозия. Цветът му потъмнява, създавайки уникален естетически ефект. Този процес прави дървото по-стабилно, намалява разширяването или свиването, причинено от промени във влажността, и подобрява устойчивостта на вредители и природни бедствия. Карбонизираната дървесина също се счита за екологично чист материал, тъй като нейното производство не разчита на химически консерванти.

Карбонизирано дърво от пауловния и [Огън кири дърво](#) обикновено се използва във външни мебели, огради, палуби и озеленяване. Неговата стабилна производителност също го прави подходящ за използване около плувни басейни и други среди с висока влажност.

Екологичните свойства на карбонизираното дърво го правят популярен избор при устойчив дизайн на сгради, подходящ за стени, подове и интериорна декорация.

Ние сме фабрика за масивна дървесина и меламинови плоскости с над 10-годишна история в Китай. Сега ние си сътрудничим с повече от 100 мебели, шкафове, дървопреработватели и компании за търговия с дървесина от световния пазар на дървесина.
