

Карбонизираната дървесина от пауловния е вид дървесина, която е подложена на високотемпературна топлинна обработка, което повишава издръжливостта и устойчивостта на корозия. Цветът му потъмнява, създавайки уникален естетически ефект. Този процес прави дървото по-стабилно, намалява разширяването или свиването, причинено от промени във влажността, и подобрява устойчивостта на вредители и природни бедствия. Карбонизираната дървесина също се счита за екологично чист материал, тъй като нейното производство не разчита на химически консерванти.

Карбонизираната дървесина от пауловния обикновено се използва за външни мебели, огради, палуби и озеленяване. Неговата стабилна производителност също го прави подходящ за използване около плувни басейни и други среди с висока влажност. Екологичните свойства на карбонизираното дърво го правят популярен избор при устойчив дизайн на сгради, подходящ за стени, подове и интериорна декорация.

Ние сме фабрика за масивна дървесина и меламинови плоскости с над 10-годишна история в Китай. Сега ние си сътрудничим с повече от 100 мебели, шкафове, дървопреработватели и компании за търговия с дървесина от световния пазар на дървесина.
