

La madera de paulownia carbonizada es un tipo de madera que se somete a un tratamiento térmico a alta temperatura, lo que mejora la durabilidad y la resistencia a la corrosión. Su color se oscurece presentando un efecto estético único. Este proceso hace que la madera sea más estable, reduce la expansión o contracción causada por los cambios de humedad y mejora la resistencia a plagas y desastres naturales. La madera carbonizada también se considera un material respetuoso con el medio ambiente porque su producción no depende de conservantes químicos.

La madera de paulownia carbonizada se usa comúnmente en muebles de exterior, cercas, terrazas y paisajismo. Su rendimiento estable también lo hace adecuado para su uso alrededor de piscinas y otros ambientes de alta humedad. Las propiedades respetuosas con el medio ambiente de la madera carbonizada la convierten en una opción popular en el diseño de edificios sostenibles, adecuada para paredes, suelos y decoración de interiores.

Somos una fábrica de tableros de madera maciza y melamina con más de 10 años de historia en China. Ahora cooperamos con más de 100 empresas de muebles, gabinetes, procesamiento de madera y comercialización de madera del mercado mundial de la madera.
