

Bois de peuplier carbonisé est un type de bois qui subit un traitement thermique à haute température, ce qui améliore la durabilité et la résistance à la corrosion. Sa couleur s'assombrit, présentant un effet esthétique unique. Ce processus rend le bois plus stable, réduit l'expansion ou la contraction causée par les changements d'humidité et améliore la résistance aux ravageurs et aux catastrophes naturelles. Le bois carbonisé est également considéré comme un matériau respectueux de l'environnement car sa production ne fait pas appel à des conservateurs chimiques.

Le bois de peuplier carbonisé est couramment utilisé dans les meubles d'extérieur, les clôtures, les terrasses et l'aménagement paysager. Ses performances stables le rendent également adapté à une utilisation autour des piscines et autres environnements très humides. Les propriétés respectueuses de l'environnement du bois carbonisé en font un choix populaire dans la conception de bâtiments durables, adapté aux murs, aux sols et à la décoration intérieure.

Nous sommes une usine de bois massif et de panneaux mélaminés avec plus de 10 ans d'histoire en Chine. Aujourd'hui, nous coopérons avec plus de 100 entreprises de meubles, d'armoires, de transformation du bois et de commerce du bois du marché mondial du bois.
