

1. **Definition:** The term "wood" refers to the natural material obtained from the trunk of a tree, which is used for various purposes, including construction, furniture, and decorative elements.

2. **Classification:** Wood can be classified based on its origin (hardwood or softwood) and its intended use (structural, decorative, or industrial).

(The following images illustrate different types of wood products.)

(The following images illustrate different types of wood products.)

3. **Properties:** Wood is a natural material with various properties, including strength, durability, and aesthetic appeal. It is also a renewable resource.

4. **Uses:** Wood is used in a wide range of applications, from construction (beams, flooring) to furniture (tables, chairs) and decorative elements (carvings, sculptures).

5. **Environmental Impact:** The use of wood in construction and furniture has a lower environmental impact compared to synthetic materials, as it is a natural, renewable resource.

6. **Conclusion:** Wood is a versatile and sustainable material that has been used for centuries. Its natural properties and aesthetic appeal make it a popular choice for many applications.

7. **References:** The information provided in this document is based on various sources, including industry standards (E1, E0, ENF) and research on wood properties and uses.
