

Core: generally made up of several pieces of wood strips spliced together, which are dried, screened and other treatments to ensure uniform texture, no obvious defects, and a certain degree of strength and stability to provide basic support for the panels.

Surface layer: melamine-impregnated adhesive film paper is laminated on both sides of the core material. This paper is specially treated with a rich selection of colors and textures to mimic the appearance of various natural woods, such as oak, walnut, etc. Various solid colors are also available to meet different decoration styles and design needs.

Aesthetics: the melamine impregnated adhesive film paper on the surface of the bright colors, clear texture, can present a realistic wood texture, so that the furniture or decoration with a high degree of decorative, and is not easy to fade, discoloration, can be maintained for a long time beautiful.

Abrasion resistance: good wear resistance, daily use of friction, scratching is not easy to leave obvious traces on the surface, can keep the surface flat and smooth, easy to clean and maintain, suitable for frequent use of furniture surfaces, such as desktop, cabinet doors.

Corrosion resistance: the general acid, alkali, grease and alcohol and other solvents have a certain degree of resistance, is not easy to be corroded by these substances, not easy to appear discoloration, blistering, degumming and other phenomena in the kitchen, bathroom and other easy to contact with chemical substances in the environment can also be better to use.

Stability: As the core material is made of wood strips spliced together and has undergone strict drying treatment, coupled with the constraints of melamine-impregnated adhesive film paper on both sides, it makes the structure of the boards more stable, and is less likely to be significantly deformed or cracked due to changes in environmental humidity and temperature.

Environmental protection: [high quality melamine blockboard](#) using environmentally friendly adhesive, formaldehyde emission is low, in line with relevant national environmental standards, such as E1, E0 and even ENF level, can provide health protection for the indoor environment. However, there are also some uneven quality products on the market, in the choice of products need to pay

attention to check the environmental test report.

Furniture Manufacturing: It is a common material for making closets, cabinets, bookcases, TV cabinets and other types of furniture, and can be used to make furniture cabinets, cabinet doors and other parts, which can meet the design requirements of different furniture styles and styles.

Interior decoration: In interior decoration, it can be used for wall and ceiling decoration, such as making siding, modeling ceiling, etc.; it can also be used for partition and screen production, adding beauty and functionality to the space.

Other uses: It can also be used in the production of some small crafts, display racks, etc., with a certain degree of versatility and practicality. The common specifications of

are 2440mm in length, 1220mm in width and 12mm, 15mm, 18mm in thickness, etc. You can choose the right specification according to the specific use scenario and demand.
