

Core ingredients and principles

High-quality materials: [Bamboo scented board](#) (bamboo only) is made from five years old mature bamboo from FSC certified natural bamboo large-scale cultivation bases. Bamboo scented boards are selected from FSC-certified natural bamboo large-scale cultivation bases with more than five years of age. Bamboo grows rapidly and is a highly sustainable resource, replacing wood with bamboo, reducing deforestation and contributing to ecological protection.

Environmentally friendly technology: the production process strictly follows the concept of environmental protection, for the characteristics of bamboo fiber research and development of special all-bamboo glue, the introduction of advanced plate glue application system to minimize the amount of glue used to eliminate the use of additives from the source, to ensure that the product is environmentally friendly and pure. After authoritative testing, it reaches the super E0 F4 star environmental protection standard, the formaldehyde emission is negligible, escorting the health of you and your family.

Performance Advantages

High strength and stability: bamboo is known as “plant steel”, high density, high hardness, toughness, elasticity. Made of [pure bamboo bamboo scented board](#) inherited these advantages, its static bending strength, internal bonding strength, board grip and other physical properties far exceed the national standards. In different temperature and humidity conditions can maintain good stability, effectively avoid deformation, cracking and other problems, the service life than ordinary wood panels to extend 2 - 3 times, can meet the long-term use of various types of furniture and decoration projects.

Good processing performance: the surface of the plate is flat and smooth, easy to cut, drill, sand, carve and other processing operations, can easily realize a variety of complex design modeling, whether it is to make simple and modern furniture, or to create a sense of art indoor decoration, can be perfectly adapted to provide designers and craftsmen with a broad creative space.

Application Scenarios

Home furniture: widely used in the field of whole-house customization, can make closets, cabinets, bookshelves, TV cabinets, dining tables and chairs and other types of furniture. Its strong and durable characteristics to ensure that furniture for a long time, natural environmental protection and antibacterial properties to protect the health of the family, natural bamboo flavor and beautiful bamboo pattern to enhance the overall style of the home.

Interior Decoration: Suitable for wall decoration, ceiling, interior partition and other decoration projects. After installation, it can bring a natural and warm feeling to the indoor space. Meanwhile, its good physical properties and moisture-proof and mildew-proof characteristics can make it maintain excellent decorative effect in different environments and prolong the service life of decoration.

Commercial space: It is also applicable in commercial places such as shopping malls, offices, hotels and restaurants. It can be used to build display racks, cashier counters, office furniture, decorative backdrops, etc. It not only meets the requirements of durability and environmental protection of commercial space, but also attracts customers through the unique texture of bamboo to enhance the quality and image of commercial space.

Environmental protection and safety

Natural anti-bacterial and anti-mold: Bamboo is rich in natural anti-bacterial ingredient “Bamboo quinone”, which still exerts powerful anti-bacterial effect even after processing into panels. Tested by the national certified laboratory, the antibacterial rate of common bacteria such as E. coli, Staphylococcus aureus, Candida albicans, etc. is up to 99.9% or more, which effectively inhibits the breeding of bacteria and prevents the growth of mold, creates a healthy and clean space for the home environment, and is especially suitable for use in bedrooms, kitchens, bathrooms, and other places with high requirements for hygiene.

Air purification function: the special micro-porous structure inside the bamboo scented board has a

strong adsorption capacity, like activated charcoal, can efficiently adsorb formaldehyde, benzene, toluene, ammonia and other harmful substances in the air, and decompose odors, reduce the content of indoor formaldehyde. At the same time, it can also continue to release a high concentration of negative ions, tested to increase the concentration of negative ions indoor 114%, so you feel like being in the forest, enjoy the freshness of natural breathing, effectively improve indoor air quality, care for the respiratory health of the whole family.

Natural bamboo aroma: made of 100% pure bamboo, naturally exudes a light bamboo fragrance, this unique aroma not only soothes the body and mind, but also goodbye to the pungent odor released by the wood particle board, adding a peaceful and comfortable atmosphere for the home, so you always feel the breath of nature.
