

Density board (medium density fiberboard MDF) is easy to coat and process into various shapes, with good structural integrity and stability. The homogeneous properties of density board also enable it to exhibit high-quality effects on paint surfaces and finishes.

Density boards are very suitable for furniture manufacturing, such as wardrobes, bed frames, desks, and TV cabinets. Its ease of processing also makes it an ideal choice for interior decoration projects, including carving complex decorations, doors, and frames. In architecture, density boards are often used to make models and templates, as well as as a material for the lower layer of flooring.

We are a solid wood and melamine board factory with over 10 years of history in China. Now, we cooperate with more than 100 furniture, cabinets, wood processing, and wood trading companies from the global wood market.
