

Particle board is a type of engineering wood, made by pressing wood particles or particles mixed with adhesive. It is cost-effective, lightweight, easy to process and install, and can be covered with decorative materials to improve appearance and durability.

Particle board is widely used in furniture manufacturing, especially as a substrate for cabinets, bookshelves, desks, and TV cabinets. Its lightweight properties also make it an ideal choice for indoor partitions and soundproof walls. Particle board is commonly used as a material for the lower floors and interior decoration projects, such as doors and decorative panels.

We are a solid wood and melamine board factory with over 10 years of history in China. Now, we cooperate with more than 100 furniture, cabinets, wood processing, and wood trading companies from the global wood market.
