

Poplar wood, as a lightweight and light colored wood, has a fast growth rate and low cost. It is easy to process and paint, and is commonly used to make furniture, plywood, particleboard, etc

Poplar wood is often used in the construction industry for components such as beams, purlins, and ceilings. Its delicate texture and moderate hardness make it a good material for furniture manufacturing, allowing for the production of both aesthetically pleasing and stable furniture products.

We are a solid wood and melamine board factory with over 10 years of history in China. Now, we cooperate with more than 100 furniture,

cabinets, wood processing, and wood trading companies from the global wood market.
